Arch of the Solstice & The Solar Altar

The Ray of the Longest Day

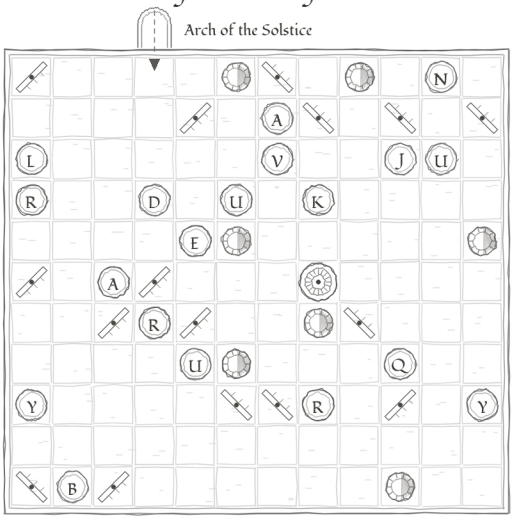

I. The Arch at the Edge of the Sands

Before the great facade of Tower II stands the Arch of the Solstice, and in its shade the Solar Altar: a round dais with a brass ring at its heart. Cairn V, the Final Marker, looks toward it along a bearing of 163°. On the longest day the sun's ray slips under the crown of the arch and falls on the altar, bent on its way by the old bronze mirrors of the courtyard.

At the solstice the ray crosses under the arch and lights the brass ring of the altar.

II. The Courtyard of Rays

1. The ray enters through the arch and runs straight down the courtyard.
2. A bronze mirror turns it a quarter turn. A fallen pillar stops it.
3. Read every sun-stone the ray crosses, in order. The eight letters are the Sigil of Cairn V.

Key

- Bronze mirror
- Fallen pillar
- Sun-stone (a letter)
- The Solar Altar (the end)

Hermes's note

«A mirror does not choose. It only gives back what it receives.»

The Sigil of Cairn V:

1	2	3	4	5	6	7	8

Speak the Sigil at Cairn V to win the fifth and last seal.

Where the light rests, the stone opens.
