# The Salt Playa (Dry Basin)

Traversing the Brine Crust & Crystalline Fissures

Emerging from the deep chasm, the desert floor collapses into a blinding white salt basin.
A fragile crust of dry halite crystals conceals subterranean pockets of saturated brine.
Step only upon dense hexagonal polygonal slabs. Avoid the treacherous dark brine sinkholes.
The Law of the Basin: The sum of crystal facets on any safe crossing row must equal XIV (14).

Playa Safe Path Waypoints: Record the 7 chosen stepping slabs (North to South entrance to Oasis):
Row I: [ ] Row II: [ ] Row III: [ ] Row IV: [ ] Row V: [ ] Row VI: [ ] Row VII: [ ]
Verification Equation: Facet Pressure Constant [P] − [A] = 14 --> Resolved in the Ledger.
