The Sun Monolith & Cairn II

Gnomonic Meridian Alignment & The Second Sacred Cairn

Rising high upon the northeastern ridge (Quadrant NE · Hoja 09A) stands the Sun Monolith.
A colossal obelisk of red sandstone carved with degree scales along its southern face.
At true local noon, its tip casts a needle-thin shadow across the graduated dial of Cairn II.
Calibrate the solar azimuth and shadow length to unlock the Second Geodetic Seal.

Solar Meridian Calculation:
1. Solar Altitude at Solstice: 64° 30' Above Horizon.
2. Meridian Shadow Vector: Intersects the Cairn II plate at Bearing 348° True North-Northwest.
3. Solstice Equation: [R] x 2 = [F] --> Given R = 3, deduce F = 6 and confirm Seal Key.
Enter Cairn II Unlock Sigil: [P][H][O][E][N][I][X]
