The Five Geodetic Cairns

Architectural Elevation Survey & Horizon Triangulation

Before the Great Silence fell upon the Observatory, the master cartographers erected five markers of unhewn sandstone across the desert basin. Each cairn preserves a celestial-terrestrial coordinate, anchoring the triangulation network that leads from Tower I to Tower II and the forgotten third sanctuary.

CAIRN I · THE WASH THRESHOLD

Location: Hoja 08B · Cuadrante NO (980, 2190)

Cone of stacked river boulders at the dry wadi entrance. Acquired by Hermes on river hunch.

CAIRN II · THE NOMAD STELE

Location: Hoja 09A · Cuadrante NE (2070, 2150)

Square stepped pedestal with carved tablets. Aligned to the solar noon shadow of the Sun Monolith.

CAIRN III · COPPER BENCHMARK

Location: Hoja 09A · Cuadrante NE (2750, 2150)

Pyramidal cairn with engraved bronze benchmark plate. Visual sighting ray: 348° NNW.

CAIRN IV · CANYON SENTRY

Location: Hoja 11B · Cuadrante SO (220, 1750)

Twin stone pillars flanking the lower gorge beneath the Sentinel Mesa. Acoustic resonance chamber.

CAIRN V · THE FINAL MARKER

Location: Hoja 12A · Cuadrante SE (2340, 280)

Monolithic plinth before the Solstice Arch. Sighting ray: 163° SSE connecting directly to Solar Altar.

»He who measures the earth with the compass of the stars does not wander in vain.
The five cairns are not mere heaps of stone, but the five finger-joints of the hand that fashioned the sanctuary.
Keep the seals intact, for they alone shall satisfy the servant and grant passage to the inner sanctum.«
