# Cairn IV: Sentry of the Canyon

## Acoustic Resonance & The Gateway to the Sentinel Mesa

Guarding the southern exit of the Whispering Chasm (Quadrant SW) stands Cairn IV: Sentry of the Canyon. Built from twin hollow stone pillars, wind blowing through its acoustic apertures generates distinct harmonics. The cliffs of the Sentinel Mesa echo the sound across the wash gorge. Only by matching the resonant frequency of the canyon walls will the stone latch open to surrender the Fourth Geodetic Seal.

Resonantia Murorum (Echo Frequencies)

Acoustic Proportion Ledger:
· Canyon Wash Fundamental Tone: Freq Gamma = 432 Hz.
· Echo Interval between Cliff Faces: Delta Tau = 1.618 beats (The Golden Ratio of Sound).
· Harmonic Formula: [V] - [E] = 10 --> With V = 12, E = 2, calculate acoustic resonance.
Enter Resonant Passphrase: [ M ][ I ][ R ][ A ][ G ][ E ]
Status: [ SEAL OF CAIRN IV RECOVERED FROM THE SENTRY PILLAR ]
