The Uncharted Path

For centuries, our order believed every path had already been mapped. We were wrong. The old kingdom left trails that appear on no atlas, hidden markers waiting for someone to connect them across the land.

My search began in the desert ruins, tracking symbols carved in stone. Every clue points toward a forgotten network of sanctuaries. The first three markers are verified.

The Astrolabe we recovered is only one piece of a much larger puzzle. It does not point to ordinary stars. When aligned with the old towers, its dials reveal landmarks that should not exist on our charts.

I have gathered all my observations, routes, and sketches in this book. Step by step, the pieces are beginning to form a single continuous route. There is still much ground to cover before the full map is revealed.

Tonight I head north to follow the trail into the mountain pass. If you hold these notes, follow the clues in order and trust your instincts.

The path is real. We just have to walk it.

The Cartographer
