The Sun Monolith

Game D4 · Solar Azimuth Alignment & Stargazer Equations

I. Expedition Objective

Calibrate the shadow cast by the solitary Sun Monolith atop Mesa del Sol. Intersect its shadow tip with the 348 degree vector from Cairn III to reveal the hidden fissure descending into the southern canyon.

OBELISCUS SOLARIS · MESA DEL SOL

II. Rules & Geodetic Alignment Ledger

Align the gnomon shadow along the solar meridian to calculate the true noon differential.

Calculate [F] from your Cipher Ledger using the Stargazer equation: [R] × 2 = [F].

The intersection of 348° NNW and 194° SSW pinpoints the broken wagons at the brink of the Great Fault.

Deduction Ledger: [R] = [__] · [F] = [__] · = [__]

Fault Brink Intersection: [194° SSW] The Descent into the Chasm is Unlocked.
